

Unitask Software Announces “Desktop Printing for Oracle EBS”

Delivers Transparent Approach to Oracle based Printing at the Desktop

Bloomfield Hills Michigan. As a leading provider of Oracle E-Business Suite solutions, Unitask Software announces the immediate availability of “Local Print” for Unitask Output Director.

“The reality of the enterprise today is that materials often need to jump from the screen to a local printer, generally one that is directly associated with the laptop or desktop system. Unitask Output Director recognizes the critical importance of moving Oracle EBS based material from the users system and printing it quickly and with security on that desktop printer. Further extending that same capability so that it may print directly to emails or secure storage repositories stand as unique value added features that drive immediate productivity.”

Available for Oracle E Business Suite implementations centered upon R11.5 as well as R12 releases, Unitask Output Director provides transparent integration for utilization and deployment of print, fax, email and store capabilities, thereby reducing operations burden on staff. This transparency allows for immediate usage without training or assimilation by the user community.

“The key to any successful technical solution is making it rapidly deployable and adaptive to the way the user community already works. Output Director with Local Print does exactly that. Utilizing existing devices, integrating with transparency and adapting to existing work habits truly makes this a set it and forget it technology,” said Royal. Managing business today is hard enough. Managing to get information onto a printer shouldn’t add to the difficulty, that’s why we created Output Director.”

About Unitask Software

Unitask Software develops and deploys solutions that accelerate the realized value of Oracle E-Business Suite Implementations. Based upon over a decade of experience in the Oracle E-Business Suite enterprise, Unitask products eliminate implementation and operational risk of the installation, while improving the application quality and usability.
