Unitask Software Announces Full Support of Sun Solaris 10 and the Oracle E-Business Suite: Unitask's Output Director Enables Oracle E-Business Suite Printing on Sun Solaris 10

**Cincinnati, OH—January 19, 2010**—Unitask Software, as a leading provider of solutions for the Oracle E-Business Suite applications market, today announced full support of printing and enterprise output management for the Oracle E-Business Suite and Sun Solaris 10 environment.

“We have found that many companies who are upgrading the enterprise to Sun Solaris 10 are demanding a commercially hardened approach to print and output management,” said Dale D. Royal, Chairman and CEO of Unitask. “Unitask’s Output Director solves the issue of mundane set up, administration and on going support, while eliminating the need for specific technical driver permeations and a whole host of other output issues that can plague the enterprise.”

Unitask’s Output Director has been key for Oracle E-Business Suite customers in meeting deadlines, reducing the pressure on support personnel, and providing printing and output based security. The Unitask solution is Oracle-certified and eliminates many of the operational challenges organizations face in the implementation, deployment, and maintenance of the Oracle E-Business Suite.

Designed and developed as an Oracle E-Business Suite application module that installs directly into an Oracle instance, Unitask Output Director does not require any additional hardware or software. This further simplifies the enterprise and day-to-day operations support. Once installed, Output Director completely eliminates the standard Oracle requirement of repeatedly setting up print queues in the operating system, as well as removing the need to configure printers within the E-Business Suite.

Oracle E-Business Suite users considering an expansion or upgrade to Sun Solaris 10 can rely on Output Director to help ensure that end-users will be able to complete critical tasks related to output both during and after the upgrade period. IT departments can complete operating system upgrades without fear of making printers unavailable for such mission critical tasks such as check printing, invoicing, and financial reporting, while further leading to increased support volume and decreased productivity.

“We are pleased to be able to offer a simple solution to what can be a very complex problem,” said Royal. “Simplified output management is part of Unitask’s ‘Do More -- Pay Less’ solution set and also a core component of the company philosophy.”

#### **About Unitask**

Unitask is committed to helping organizations implement, manage and run their Oracle E-Business Suite. Unitask creates, sells and supports software products based on experience gained from over a decade of Oracle E-Business Suite implementation projects. Customers of the Oracle E-Business Suite around the world rely on Unitask products to eliminate implementation and operational risk, improve the quality of the application and accelerate time-to-value.
